

Maintenance

Sydney Water Tanks require very little maintenance and should give many years of trouble free use. However to obtain the best benefit from your rainwater reuse system follow these simple tips:

Prevent debris entering the stormwater system draining into the tank

- Keep gutters free of debris such as leaves and twigs and vermin. Always practise safe work methods if using a ladder to reach the gutters for cleaning.
- Proprietary leaf guards attached to the gutter will assist in keeping leaves out of the gutters.
- Fitting a leaf guard rain head to each downpipe will stop roof debris entering the rain water re-use system. These can be fitted about two metres from the ground on two storey houses to make them easier to clean.
- Engaging a professional gutter cleaning company to clean gutters with a powerful vacuum cleaner is the easiest way.

Leaf basket

Undo the three stainless steel bolts securing the access cover into the tank and remove the cover. Reach inside the turret and remove the basket for cleaning.

THINK SAFETY. DO NOT LEAVE THE TANK OPEN IF EMPTYING THE BASKET AWAY FROM THE TANK. DO NOT PERFORM LEAF BASKET CLEANING WITH CHILDREN PRESENT.
